The draft public exhibition regulation includes proposed changes to the recording and reporting mandatory conditions. Do you have any comments on the recording and reporting requirements?

Yes

No

If yes, please include your comment below and indicate whether it relates to works

A. not required to meter (that is, below the metering thresholds) - clause 250 of the regulations

B. required to have a meter and data logger but not telemetry - new mandatory condition clause 244A of the regulations

C. required to have a meter, data logger and telemetry - clause 244 of the regulations

Please provide your comments on the proposed recording and reporting requirements

I'm a member of a family run organisation that are water uses. We are endeavoring to comply with the new regulations, at great expense at a time of limited income earning capability because of the de-abilitating drought . The restrictive prevailing condition is making it difficult to complete certification of metering instillation , since there no water to complete the certification process. There is no reasonable alternative metering of pipe sizes larger than 1200 mm. There no direction from the regulator on a acceptable telemetry system, which making instillation before the 1st of December 2019 dead line prohibitive. The connectivity of telemetry in some areas unworkable. The lack of direction from the national regulator ,prohibitive weather conditions , prohibitive access to components required for compliance , is putting water uses in a difficult position which has been fabricated by the national regulator.

Do you have any other comments on the draft public exhibition regulation?

Yes

No

If yes, please provide your comments.

It may be prudent to make some concessions that will make the current situation more tennable for irrigation industry. So that the implimentation of the draft regulation acheives what it is ment to achieve.
