

1 July 2021

## Opening water allocations 2021-22

### Groundwater users

The NSW Department of Planning, Industry and Environment today announced opening groundwater allocations for the 2021-22 water year.

All high priority access licences in groundwater sources are receiving full allocations.

The 2020-21 water year delivered drought-breaking rains, particularly in eastern NSW, combined with high temperatures. Groundwater sources across NSW were heavily relied upon due to severe ongoing water shortages in the first half of the water year.

Reduced Available Water Determinations (AWDs) are the first action implemented under water sharing plan rules to return groundwater extraction to within sustainable limits. Where the extraction limit for a groundwater source is exceeded, the response is to reduce the amount of water allocated.

Two groundwater sources, listed below, have triggered this action for 2021-22. While the plan rules are designed to “*return average annual extractions in the relevant groundwater source to the long term average annual extraction limit*”, this can be done over a period of time, allowing water users to adjust their operations, rather than immediately applying a zero or near zero allocation.

However, it should be noted that although extraction may be within long-term sustainable extraction limits for a groundwater source, there may be localised significant drawdown causing impacts that must be managed. In this case, temporary water restrictions are applied to limit the access to water in accounts for a period while water levels recover. Upper Lachlan Zone 1 Management Zone is one such groundwater source to receive a temporary water restriction.

The allocations to licence categories in all water sources are tabulated below. In summary, all licence categories will receive a full allocation for the 2021-22 water year, apart from those aquifer access licences in the two water sources listed immediately below where their extraction limits have been exceeded, and those linked to reduced surface water allocations.

#### Lower Murrumbidgee (Deep)

- Aquifer licences in the Lower Murrumbidgee (deep) groundwater source have received an allocation of **0.60 megalitre (ML)/share**. This is the estimated allocation required to bring the average annual extraction back within the water sharing plan’s compliance limit.
- This is the second consecutive year with reduced allocation for this water source.

#### GAB Eastern Recharge

- Aquifer access licences in the Eastern Recharge groundwater source have received an allocation of **0.38 ML/share**. This is the estimated allocation required to steer the average usage back to within the water sharing plan’s compliance limit.
- This is the fourth consecutive year with reduced allocations in this water source.

### Upper Lachlan Alluvial Zone 1

- The temporary water restriction order in place in the outgoing water year has been extended into this water year to assist with the local recovery of groundwater levels.
- Under the renewed restriction order, irrigators will be allowed access to **30%** of their water entitlement share and may trade this volume within the management zone. Trade into the management zone from those outside is not permitted.
- This level of access, combined with the extended period of forewarning, is to allow water users to adjust their planned production, while ensuring that local bore water levels can recover.
- The restriction order will also protect water for critical human and environmental needs and prevent irreversible damage to the Upper Lachlan aquifer.
- Water levels will continue to be monitored so that the restriction can be eased once there is sufficient recovery.

When metering is finalised across groundwater sources, any reduced allocation based on forecast usage will be re-assessed. If actual usage data shows the precautionary reduction was excessive then a further allocation can be made by early October 2021. However, final meter readings will not be used to further reduce any already reduced allocations for this water year.
