

# Report card for the Murrah Estuary Tributaries Water Source

Report card 15 of 27

## Water source context

Water Sharing Plan:	Bega River Area Regulated, Unregulated and Alluvial Water Sources 2023
Extraction Management Unit (EMU):	Murrah-Wallaga Extraction Management Unit
Area:	33 km <sup>2</sup>
Inflowing water source:	Murrah River
Receiving water source:	Nil
Groundwater-dependent ecosystems:	Identified at the plan commencement
Approximate average annual rainfall:	950 - 975 mm

## River flows

80 <sup>th</sup> percentile:	No gauge located in this water source
------------------------------	---------------------------------------

## Basic landholder rights

Domestic and stock rights estimate:	103 ML/year
Native title rights:	0 ML/year

## Licensed water entitlements

Total surface water entitlement:	0 ML/year
Total groundwater entitlement:	0 ML/year
Local water utilities entitlement:	0 ML/year

## Rules

### Managing Access Licenses

Each water access licence has its own share component (volume of the licence) and a water allocation account that acts like a bank account where water is credited or debited.

- Water is credited to an account by an available water determination or if water is traded in (purchased) during the year from other licence holders
- Water is debited from the account when water is extracted or traded out (sold). Total extraction from a work (pump, bore, etc.) will be measured via metering or logbooks.

### Carryover and Individual Account Limits

Domestic and stock, unregulated river and aquifer access licence accounts:

- Carryover of water remaining in a water allocation account is permitted at the end of each water year up to 1 ML per unit share or 100 % of share component (where expressed in ML).
- The maximum water account debit in any 3 consecutive water years is the volume of water allocated to the account over those 3 years from available water determinations plus any adjustments made for allocation assignments (trades) or water allocation re-credited into the account.

Table 1 Draft rules for granting access licenses

Type	Current rules	Proposed rules
<p>There are limited purposes for which a new licence will be granted. It is anticipated that most additional water needs will be sourced from the market. One reason a licence may be granted is for Aboriginal cultural purposes. Other reasons are identified in Clause 10 of the <i>Water Management Act General Regulation 2018</i>.</p>		
Aboriginal cultural access licence	Not permitted	Permitted up to 10 ML/year per licence, subject to assessment
Aboriginal community development access licence	Not permitted.	No change.

Table 2 Draft surface water access rules

Type	Current rules	Proposed rules
Cease to pump	Take is not permitted when there is no visible flow at the point of take.	No change.
Take from in-river dams	Take is not permitted when the dam is below full capacity unless otherwise specified on the water supply work approval for the dam.	No change
Take from natural in-river pools	Take is not permitted when the pool is below full capacity.	No change
Take from natural off-river pools	Take is not permitted when the pool is below full capacity unless otherwise specified on the water supply work approval.	Take is not permitted when the pool is below 50 % capacity unless otherwise specified on the water supply work approval.

Table 3 Draft alluvial groundwater access rules

Type	Current rules	Proposed rules
<b>Take of alluvial groundwater</b>	Take is not permitted when there is no visible flow in the river at the location closest to the supply work used for extraction.	No change. If the location closest to the water supply work in the river is a pool, then take is not permitted if the pool is below full capacity

Table 4 Draft exemptions from access rules

Type	Current rules	Proposed rules
<b>Location</b>	Groundwater works greater than 40 m from the river are exempt from the access rules.	No exemption based on distance. All groundwater works located in the alluvium will be subject to access rules.
<b>Aquifer interference activities</b>	Take may occur for an access licence that nominates an aquifer interference approval.	Access rules do not apply to the take of groundwater or surface water under an access licence for which a planning approval is in force if: <ul style="list-style-type: none"> <li>the licence holder complies with an approved water management plan, and</li> <li>in the Minister’s opinion, the licence holder is not reasonably capable of complying with the access rules.</li> </ul>

**Note:** Water taken under basic landholder rights (domestic and stock rights, harvestable rights and native title rights) are not subject to the access and trade rules set by water sharing plans and therefore have not been listed in the above table.

Table 5 Draft rules for constructing surface water supply works

Type	Current rules	Proposed rules
In-river dams	Permitted only on first and second order streams only, subject to assessment.	No change.
All surface water works	Not permitted.	Not permitted unless the water supply work is used solely to take water under a basic landholder right or an Aboriginal Cultural access licence.  Not permitted within 200 m upstream of coastal wetlands defined in the <i>State Environmental Planning Policy (Resilience and Hazards) 2021</i> or within 3 km upstream of Ramsar wetlands, unless assessed to pose no more than minimal harm.

**Note:** the distance rules for groundwater water supply works are detailed in the [Report Card for the Draft Rules for Groundwater Water Supply Works](#).

Table 6 Draft water trading (dealing) rules

Type	Current rules	Proposed rules
Trading covers conversion of access licence to a new category (for example from unregulated river to aquifer), assignment of rights dealings (trading of a licence), share component dealings between water sources (trading of entitlement between water sources), water allocation dealings (trading an annual allocation) and water supply works dealings (relocation of an extraction point).		
INTO water source	Prohibited.	No change.
WITHIN water source	Not applicable.	No change.

## Key factors for decisions

- No entitlement exists in the Murrah Estuary Tributaries Water Source. Access rules reflect this.
- The water source flows into Murrah River Estuary. A high risk to low flows and a medium for high flows for insufficient water for estuarine ecosystems has been identified for this water source. Trade and other rules reflect this.
- The *State Environment Planning Policy (Resilience and Hazards) 2021* identifies coastal wetlands in this water source, which require protection from over-extraction.
- The *Marine Estate Management Act 2014* requires the Minister for Lands and Water to have regard to the NSW Marine Estate Management Strategy.

---

## Public exhibition

The Department of Planning and Environment seeks feedback from the public on the suitability of the proposed rules for this water source.

The draft Water Sharing Plan for the Bega River Area Regulated, Unregulated and Alluvial Water Sources and supporting fact sheets are available from the department's [Public Exhibition website](#).
