

Cubbaroo Section hydrographs and additional information

Hydrographs: page 3 - 12

All hydrographs are plotted on the same vertical and horizontal axis, a location map for all sections in the Lower Namoi is included on page 2, the map zoomed in map for the Cubbaroo section is on page 3 followed by the hydrographs.

Hydrographs are displayed by sections generally in order from North to South starting in the East, sites that do not fall along a section line are included with the nearest section.

Additional climate data: page 13

A residual rainfall plot has been included for all available data for Wee Waa since 1884, the graph plots the cumulative difference from average rainfall and provides a visual representation of the rainfall history in an area. A falling trend indicates a period of lower than average rainfall, a rising trend showing periods of above average rainfall.

Additional accounts information: page 14

A graph that shows the volume in accounts that had supplementary licences and have not changed their aquifer access licence share volume since 2006 is provided. This is the extraction data used on slide 34 of the presentation for the Lower Namoi Groundwater Source stakeholder meeting on 14th September 2022.
